SUBJECT INDEX

ATMOS Fourier transform spectrometer, optical design of the, 12
Alignment approach to an infrared (IR) scanning system, modular design/assembly/, 161
Analysis, applications of the two-dimensional fast Fourier transform for optical systems, 70
Applications of the two-dimensional fast Fourier transform for optical systems analysis, 70
Architectures, interaction of imaging system requirements with copy machine, 177
Aspherical surface plastic lenses, optical design and evaluation of large, 78
Assembly/alignment approach to an infrared (IR) scanning system, modular design/, 161
Atmosphere by a rotating phase plate, simulation of a moving, 229
Axially symmetric optical systems, computer-assisted design of well-baffled, 129

Baffled axially symmetric optical systems, computer-assisted design of well-, 129
Beam printer, optical lens system for laser, 202

Camera, a very small, 194
Cartridges, comparison of systems for high-speed surface flaw measurement of, 276
Cassegrain telescope selection, design, and tolerancing, optical system engineering approach to, 27

Centering tolerance, yield estimation for mass-produced lenses based on computer simulation of the, 141
Characterization for cylindrical mirrors and lenses, optical figure, 257
Coherent fiber optics test techniques, 237
Collimator and laser tracker test system, design of a 1-m unobscured infrared, 224
Comparison of systems for high-speed surface flaw measurement of cartridges, 276
Compensation for step-stare systems by focal plane and optics manipulation, image motion, 209
Computer-assisted design of well-baffled axially symmetric optical systems, 129
Computer simulation of the centering tolerance yield estimation for mass-produced lenses based on, 141
Control systems in document processing and printing, specialized electro-optic quality, 184
Copy machine architectures, interaction of imaging system requirements with, 177
Coronagraphs, diffraction limit in, 47
Cylindrical lenses, manufacture of, 268
Cylindrical mirrors and lenses, optical figure characterization for, 257

Design aspects of optomechanical engineering, mechanical, 92
Design/assembly/alignment approach to an infrared (IR) scanning system, modular, 161
Design and evaluation of large aspherical surface plastic lenses, optical, 78
Design of a 1-m unobscured infrared collimator and laser tracker test system, 224
Design, performance, and selection of Kodak's "EKTRAMAX" lens, 2
Design, and tolerancing, optical system eingineering approach to Cassegrain telescope selection, 27
Design of well-baffled axially symmetric optical systems, computer-assisted, 129
Development of low-cost military night vision goggles for individual use, 170
Diffraction limit in coronagraphs, 47
Dimensional measurements with electro-optics, high throughput, 282
Display with volume hologram, superimposed information, 198
Document processing and printing, specialized electro-optic quality control systems in, 184
Domes, production testing method for wide-angle, 265

"EKTRAMAX" lens, design, performance, and selection of Kodak's, 2
Electro-optic quality control systems in document processing and printing, specialized, 184
Electro-optical laser unequal path interferometer (LUPI), 218
Electro-optics, high throughput dimensional measurements with, 282
Encircled energy performance prediction formula for tolerancing, 44
Energy performance prediction formula for tolerancing, encircled, 44
Engineering of an advanced holographic one-tube goggle, systems, 153
Engineering approach to Cassegrain telescope selection, design, and tolerancing, optical system, 27
Engineering, mechanical design aspects of optomechanical, 92
Equipment (POTE), periscope optical test, 246
Estimation for mass-produced lenses based on computer simulation of the centering tolerance , yield, 141
Evaluation of large aspherical surface plastic lenses, optical design and, 78

Fast Fourier transform for optical systems analysis, applications of the two-dimensional, 70
Fiber optics test techniques, coherent, 237
Figure characterization for cylindrical mirrors and lenses, optical, 257
Fine guidance—a design for manufacturability, Space Telescope, 53
Flaw measurement of cartridges, comparison of systems for high-speed surface, 276
Focal plane and optics manipulation, image motion compensation for step-stare systems by, 209
Formula for tolerancing, encircled energy performance prediction, 44
Fourier transform spectrometer, optical design of the ATMOS, 12

Fresnel lenses in optical systems: some advantages and limitations, use of, 63

Goggle, systems engineering of an advanced holographic one-tube, 153
Goggles for individual use, development of low-cost military night vision, 170
Guidance—a design for manufacturability, Space Telescope fine, 53

High-powered laser, periscope optics and the, 116
High-speed surface flaw measurement of cartridges, comparison of systems for, 276
High throughput dimensional measurements with electro-optics, 282
Hologram, superimposed information display with volume, 198
Holographic one-tube goggle, systems engineering of an advanced, 153

(IR) scanning system, modular design/assembly/alignment approach to an infrared, 161
Image motion compensation for step-stare systems by focal plane and optics manipulation, 209
Imaging system requirements with copy machine architectures, interaction of, 177
Individual use, development of low-cost military night vision goggles for, 170
Information display with volume hologram, superimposed, 198
Infrared collimator and laser tracker test system, design of a 1-m unobscured, 224
Infrared (IR) scanning system, modular design/assembly/alignment approach to an, 161
Integrating Nd:YAG lasers into optical systems, 121
Interaction of imaging system requirements with copy machine architectures, 177
Interferometer (LUPI), electro-optical laser unequal path, 218

Kodak's "EKTRAMAX" lens, design, performance, and selection of, 2

(LUPI), electro-optical laser unequal path interferometer, 218
Large aspherical surface plastic lenses, optical design and evaluation of, 78
Laser beam printer, optical lens system for, 202
Laser, periscope optics and the high-powered, 116
Laser tracker test system, design of a 1-m unobscured infrared collimator and, 224
Laser unequal path interferometer (LUPI), electro-optical, 218
Lasers into optical systems, integrating Nd:YAG, 121
Lens, design, performance and selection of Kodak's "EKTRAMAX", 2
Lens system for laser beam printer, optical, 202
Lenses based on computer simulation of the centering tolerance, yield estimation for mass-produced, 141
Lenses, manufacture of cylindrical, 268
Lenses, optical design and evaluation of large aspherical surface plastic, 78
Lenses, optical figure characterization for cylindrical mirrors and, 257
Lenses in optical systems: some advantages and limitations, use of Fresnel, 63
Limit in coronagraphs, diffraction, 47
Long focal length optical systems to thermal shock, response of, 108
Low-cost military night vision goggles for individual use, development of, 170

(MMT) and the lessons we learned from it, the multiple mirror telescope, 150
(MTF) tolerancing, semi-automatic modulation transfer function, 34
Manipulation, image motion compensation for step-stare systems by focal plane and optics, 209
Manufacturability, Space Telescope fine guidance—a design for, 53
Manufacture of cylindrical lenses, 268
Mass-produced lenses based on computer simulation of the centering tolerance, yield estimation for, 141

Measurement of cartridges, comparison of systems for high-speed surface flaw, 276
Measurements with electro-optics, high throughput dimensional, 282
Mechanical design aspects of optomechanical engineering, 92
Method for wide-angle domes, production testing, 265
Military night vision goggles for individual use, development of low-cost, 170
Mirror telescope and the lessons we learned from it, the multiple, 150
Mirrors and lenses, optical figure characterization for cylindrical, 257
Modular design/assembly/alignment approach to an infrared (IR) scanning system, 161
Modulation transfer function (MTF) tolerancing, semi-automatic, 34
Motion compensation for step-stare systems by focal plane and optics manipulation, image, 209
Moving atmosphere by a rotating phase plate, simulation of a, 229
Multiple mirror telescope (MMT) and the lessons we learned from it, the, 150

Nd:YAG lasers into optical systems, integrating, 121
Night vision goggles for individual use, development of low-cost military, 170

1-m unobscured infrared collimator and laser tracker test system, design of a, 224
One-tube goggle, systems engineering of an advanced holographic, 153
Optical design of the ATMOS Fourier transform spectrometer, 12
Optical design and evaluation of large aspherical surface plastic lenses, 78
Optical figure characterization for cylindrical mirrors and lenses, 257
Optical lens system for laser beam printer, 202
Optical system engineering approach to Cassegrain telescope selection, design, and tolerancing, 27
Optical systems analysis, applications of the two-dimensional fast Fourier transform for, 70
Optical systems, computer-assisted design of well-baffled axially symmetric, 129
Optical systems, integrating Nd:YAG lasers into, 121
Optical systems: some advantages and limitations, use of Fresnel lenses in, 63
Optical systems, thermal effects in, 101
Optical systems to thermal shock, response of long focal length, 108
Optical test equipment (POTE), periscope, 246
Optics and the high-powered laser, periscope, 116
Optics manipulation, image motion compensation for step-stare systems by focal plane and, 209
Optomechanical engineering, mechanical design aspects of, 92

(POTE), periscope optical test equipment, 246
Path interferometer (LUPI), electro-optical laser unequal, 218
Periscope optical test equipment (POTE), 246
Periscope optics and the high-powered laser, 116
Performance prediction formula for tolerancing, encircled energy, 44
Performance and selection of Kodak's "EKTRAMAX" lens, design, 2
Phase plate, simulation of a moving atmosphere by a rotating, 229
Plastic lenses, optical design and evaluation of large aspherical surface, 78
Plate, simulation of a moving atmosphere by a rotating phase, 229
Prediction formula for tolerancing, encircled energy performance, 44
Printer, optical lens system for laser beam, 202
Printing, specialized electro-optic quality control systems in document processing and, 184
Processing and printing, specialized electro-optic quality control systems in document, 184
Production testing method for wide-angle domes, 265

Quality control systems in document processing and printing, specialized electro-optic, 184

Requirements with copy machine architectures, interaction of imaging system, 177
Response of long focal length optical systems to thermal shock, 108
Rotating phase plate, simulation of a moving atmosphere by a, 229

Scanning system, modular design/assembly/alignment approach to an infrared (IR), 161
Selection, design, and tolerancing, optical system engineering approach to Cassegrain telescope, 27
Selection of Kodak's "EKTRAMAX" lens, design, performance and, 2
Semi-automatic modulation transfer function (MTF) tolerancing, 34
Shock, response of long focal length optical systems to thermal, 108
Simulation of the centering tolerance, yield estimation for mass-produced lenses based on computer, 141
Simulation of a moving atmosphere by a rotating phase plate, 229
Small camera, a very, 194
Space Telescope fine guidance—a design for manufacturability, 53
Specialized electro-optic quality control systems in document processing and printing, 184
Spectrometer, optical design of the ATMOS Fourier transform, 12
Step-stare systems by focal plane and optics manipulation, image motion compensation for, 209
Superimposed information display with volume hologram, 198
Surface flaw measurement of cartridges, comparison of systems for high-speed, 276
Surface plastic lenses, optical design and evaluation of large aspherical, 78
Symmetric optical systems, computer-assisted design of well-baffled axially, 129
System, design of a 1-m unobscured infrared collimator and laser tracker test, 224
System engineering approach to Cassegrain telescope selection, design, and tolerancing, optical, 27
System for laser beam printer, optical lens, 202
System requirements with copy machine architectures, interaction of imaging, 177
Systems analysis, applications of the two-dimensional fast Fourier transform for optical, 70
Systems, computer-assisted design of well-baffled axially symmetric optical, 129
Systems in document processing and printing, specialized electro-optic quality control, 184
Systems engineering of an advanced holographic one-tube goggle, 153
Systems for high-speed surface flaw measurement of cartridges, comparison of, 276
Systems, integrating Nd:YAG lasers into optical, 121
Systems: some advantages and limitations, use of Fresnel lenses in optical, 63
Systems, thermal effects in optical, 101
Systems to thermal shock, response of long focal length optical, 108

Techniques, coherent fiber optics test, 237
Telescope fine guidance—a design for manufacturability, Space, 53
Telescope (MMT) and the lessons we learned from it, the multiple mirror, 150
Telescope selection, design, and tolerancing, optical system engineering approach to Cassegrain, 27
Test equipment (POTE), periscope optical, 246
Test system, design of a 1-m unobscured infrared collimator and laser tracker, 224
Test techniques, coherent fiber optics, 237
Testing method for wide-angle domes, production, 265
Thermal effects in optical systems, 101
Thermal shock, response of long focal length optical systems to, 108
Tolerance, yield estimation for mass-produced lenses based on computer simulation of the centering, 141
Tolerancing, encircled energy performance prediction formula for, 44

Tolerancing, optical system engineering approach to Cassegrain telescope selection, design, and, 27
Tolerancing, semi-automatic modulation transfer function (MTF), 34
Tracker test system, design of a 1-m unobscured infrared collimator and laser, 224
Transform spectrometer, optical design of the ATMOS Fourier, 12
Two-dimensional fast Fourier transform for optical systems analysis, applications of the 70

Unequal path interferometer (LUPI), electro-optical laser, 218
Unobscured infrared collimator and laser tracker test system, design of a 1-m, 224
Use of Fresnel lenses in optical systems: some advantages and limitations, 63

Very small camera, a, 194
Vision goggles for individual use, development of low-cost military night, 170
Volume hologram, superimposed information display with, 198

Well-baffled axially symmetric optical systems, computer-assisted design of, 129
Wide-angle domes, production testing method for, 265

Yield estimation for mass-produced lenses based on computer simulation of the centering tolerance, 141
